

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	30 September 2026	Team ID	SWTID-2026-1617
Project Name	Import Data using Transform Maps (Spreadsheet)	Maximum Marks	4 Marks

Functional Requirements:

The solution shall support importing employee training data into ServiceNow and securing the resulting records through roles and ACLs.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Table & Field Setup	Create the Employee Training table with Training Name, Completion Date, Status and Employee reference fields. Configure the required Status choices.
FR-2	Spreadsheet & Import Set	Prepare the spreadsheet with Training Name, Completion Date, Status and Employee. Use System Import Sets → Load Data to upload the file and create the import source.
FR-3	Transform Map & Field Mapping	Create a Transform Map under System Import Sets → Administration → Transform Maps. Add Field Maps for the source and target fields, then run Transform to import the records.
FR-4	Dot-Walking	Use the Employee reference field with dot-walking to access related Department information in Employee Training Records.
FR-5	User & Role Setup	Create a test user and HR Manager role, assign the role to the test user, and add the required role to the Employee Training Records application/menu and module.
FR-6	ACL & Security	Elevate to security_admin and create the required Read and Write ACLs for Employee Training Records. Assign the HR Manager role to the appropriate ACLs.
FR-7	Access Validation	Impersonate the authorized user to verify the records and fields can be viewed/edited. Test another user to confirm the configured access restriction.

Non-functional Requirements:

The solution shall remain usable, secure, reliable and maintainable during normal ServiceNow operation.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The table, spreadsheet preparation, import, field mapping, role setup and testing process should be clear and easy for administrators/developers to understand and validate.
NFR-2	Security	Imported Employee Training records must be protected by configured roles and ACLs, with access provided only according to the defined permissions.
NFR-3	Reliability	Import Sets and Transform Maps should consistently map source fields to the intended target fields and create accurate records.
NFR-4	Performance	Import mappings and access-control rules should be configured efficiently so normal ServiceNow operations remain responsive.
NFR-5	Availability	The import and security workflow should be usable whenever the ServiceNow application and required platform features are available.
NFR-6	Scalability	The solution should support additional employee training records, users and roles without redesigning the core import and security workflow.

Solution Summary: Import employee training data into ServiceNow using Import Sets and Transform Maps; use Employee dot-walking for related Department information; apply role-based ACLs; and validate access by impersonating users.
