

Project Design Phase

Problem - Solution Fit

Date	30 September 2026
Team ID	SWTID-2026-1617
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem - Solution Fit: The project addresses the need to import spreadsheet data into ServiceNow, map the imported fields to the Employee Training Records table, access related employee information using dot-walking, and secure the records through roles and Access Control Lists (ACLs).

1. CUSTOMER SEGMENT(S) ServiceNow administrators, developers, HR managers and security teams who manage employee training records, data imports and controlled access.	6. CUSTOMER CONSTRAINTS Spreadsheet data must use the required fields and formats. Import mappings must be configured correctly, and roles/ACLs must be tested to avoid incorrect access.	5. AVAILABLE SOLUTIONS ServiceNow Import Sets and Transform Maps provide structured data import and field mapping. Roles and ACLs provide controlled access to the imported records.
2. JOBS-TO-BE-DONE / PROBLEMS Create Employee Training Records; import Training Name, Completion Date, Status and Employee from a spreadsheet; map fields; access employee department details; protect records.	9. PROBLEM ROOT CAUSE Training information may begin in spreadsheets while operational records are maintained in ServiceNow. Without proper mapping and security configuration, data can be incomplete, disconnected or exposed to unauthorized users.	7. BEHAVIOUR Admins create the table, prepare the spreadsheet, load data through System Import Sets, configure Transform Maps and Field Maps, use dot-walking, create roles/ACLs, and test with different users.
3. TRIGGERS A need to migrate or update employee training data, maintain accurate reporting, connect records to employees, or enforce controlled access to training information.	10. YOUR SOLUTION Create the Employee Training Records table, load spreadsheet data through System Import Sets, map source fields with Transform Maps, use Employee reference dot-walking for Department information, and apply role-based Read/Write ACLs.	8. CHANNELS & BEHAVIOUR ServiceNow All menu, System Import Sets, Load Data, Transform Maps, Employee Training Records, User Administration, Roles, Elevate Role, ACL configuration, impersonation and testing.
4. EMOTIONS: BEFORE / AFTER Before: concern about manual data entry, incorrect mapping and unauthorized access. After: greater confidence in accurate imported records, related employee information and controlled access.		

Problem-Solution Fit Summary: The key fit is between the need for accurate and secure employee training data in ServiceNow and a solution that combines spreadsheet importing, Transform Maps, dot-walking, user/role management and ACL-based access control.

Source basis: Importing & Securing Data in ServiceNow. The source describes Employee Training Records, spreadsheet import through System Import Sets, Transform Maps and Field Maps, dot-walking to Department, role creation, ACL Read/Write access, and impersonation-based testing.
